

I am W4NI, FCC-licensed for over 35 years.

1- Even cursory tests indicate that radiation limits for BPL are inadequate. BPL radiation limits are far too high.

2- FCC must require much more enforceable action on the part of utilities when BPL interference happens. In the past, utilities have often been lax with regard to basic line noise suppression. With BPL, interference of a far worse type can easily be created by utilities.

3- In emergency situations, FCC must be able to quickly force cessation of BPL usage by utilities.
